DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being Chung et al by US 6,359,871).

Regarding claim 1, Chung discloses a method for complementing a telephone connection with additional information, comprising the steps of

initiating the telephone connection between a transmitting telecommunication device and a receiving telecommunication device,

composing, at said transmitting telecommunication device (portable device or controller base station), a signaling message of predetermined form to be transmitted in

association with the telephone connection, said signaling message containing the additional information,

indicating, within said signaling message, the intended receiving part within said receiving telecommunication device of at least part of said signaling message, and transmitting said signaling message from said transmitting telecommunication device to said receiving telecommunication device. See col.8 lines 35-50, col.9 lines 25-45.

Regarding claim 2, Chung discloses the step of indicating, within said signaling message, a CAI protocol (certain protocol) used in the creation of said signaling message. See col.7 lines 45-55.

Regarding claim 3, Chung discloses the step of indicating, within said signaling message, a certain coding scheme used in the creation of said signaling message. Col.9 lines 10-30.

Regarding claim 4, Chung discloses the steps of composing said signaling message from a number of header fields and a data field, and

indicating, within said signaling message, the combined length of said header fields. Col.11 lines 15-25, figure 3.

Regarding claim 5, Chung discloses a telecommunication device for the transmission of signaling and payload information, comprising

a transceiver unit,

a unit for processing received payload information,

Art Unit: 2665

a unit for processing payload information to be transmitted,
a control block, and
a signaling unit of which said transceiver unit is arranged to direct received signaling information to the control block and to take signaling information to be transmitted from the control block, and said signaling unit is arranged to compose a signaling message of predetermined form to be transmitted in association with a payload information transmission connection, and to indicate, within said signaling message, the intended receiving part within another telecommunication device of at least part of said signaling message. See col.13 lines 5-30, col.8 lines 35-50, col.9 lines 25-45.

Regarding claim 6, Chung discloses that signaling unit is additionally arranged to receive a signaling message from another telecommunication device in association with a payload information transmission connection, and to direct at least part of the received signaling message to a certain functional block within the telecommunication device according to an indication contained in the received signaling message. See figure 3.

Conclusion

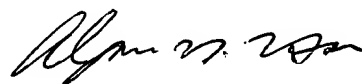

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hamalainen et al (US Patent No. 6,249,584) discloses method for indicating enciphering for data transmission between a mobile communication network and a mobile station.

Slotte et al (US Patent No. 6,408,063 B1) discloses method and arrangement for complementing a telephone connection with additional information.

4. Any inquiry concerning this communication or earlier communication from the examiner should be directed to Thien Tran whose telephone number is (703) 308-4388. The examiner can normally be reached on Monday-Friday from 8:30AM to 5:00PM.
